# MODEL IDENTIFICATION

This model identification sheet shows a brief overview of some of the solid fuel models that can be hard to identify. A more comprehensive list may be compiled at a later date, but you'll likely find this one is sufficient in the majority of cases.

The key points below should help to determine which solid fuel model your customer requires parts for.

## SOLID FUEL

1. Three controls: Two air controls on the left and a door lock on the right will show they have a standard New Model Multi.
2. If their heater has a large spinner damper control in the middle of the ash door, then they have an Old Model Multi.
3. Wegj, Wegj 2000, Blenz, Xcel, Qewb, etc, mostly have the model name on the unit.
4. A fold down door (reminiscent of an oven door) will show they have one of the two Wegj models.
5. Looking inside the Wegj: If the firebox is cylindrical then it's an Old Model Wegj.
6. Looking inside the Wegj: If the firebox is rectangular, then it's a Wegj 2000.
7. Another couple of easy ways to tell the difference between the old and new model Wegj... The old model does not have a base plate protruding from the bottom of the plinth. The Old Model Wegj has a 7" flue system, and the Wegj 2000 has a 6" flue.
8. If they have the Old Model Wegj, then the combustion plates have gone through many design changes, so even though their replacement may look very different to the original one, it has been designed to fit. – This can also cause problems if they try to describe the plate instead of the fire it came from.
9. Of the Qewb variants, the Qewb 2000 has a curved glass, whereas the others have a flat piece of glass. It is therefore the only variant to use a different door, glass, door rope, and glass packing to the others.
10. The following models all share most of the same internal parts: Qewb, Qewb Multi, Qewb Inbuilt, Qewb 2000, Qewb 2000 Multi, Qewb 2000 Inbuilt, Tenz, Focuz, Flamestar, Radiant, and Hobson. Combustion plate, bricks, and castings (where applicable), are identical. Though air tubes are generally the same, there are new requirements for the Hobson clean air version.

## GENERAL NOTES:

Once some parts get to the stage at which they need replaced, they can often be stretched (or sometimes reduced) to a size that is not even close to the original size. - This is especially the case with combustion plates and half moon castings.

## MULTI CASTINGS

If your customer has the model with the large spinner control in the centre of the ash door, then they need OLD MODEL castings. If it doesn't have that spinner control, then it's the NEW MODEL castings they use.

## MULTI COMBUSTION PLATE

The combustion plate needed for the std multi is usually the new model one, and if an old model one is required, it's most likely the larger of the two available. It's not quite as straight forward as the castings though, but the short version is...

1. If the combustion plate they took out is fairly flat, with bars front and back, and a cut-out on either side then it's the New Model.
2. If the one they took out is a flat plate with another piece at the front vertical to the main plate, and it has a couple of prongs sticking out, then it is the old model plate they need.
